

Longterm Service Agreements

HKJ Group offers comprehensive and flexible Long Term Agreements (LTAs) for gas turbines. HKJ Group's LTAs are designed to optimize our customer's maintenance budget by offering competitive parts life guarantees, minimal parts fallout, coverage during unscheduled inspections, control of inventory and proactive contract management to ensure total coverage.

HKJ Group recognizes that every customer has different needs and we understand that market conditions frequently change. We work with our customers to design a program for their particular situation in terms of scope coverage, risk assumption, duration and payment structure. Our agreements can be structured to include not only the gas turbine, but also the generator, steam turbine and respective auxiliaries.

By incorporating HKJ Group refurbished parts into our LTAs, we prolong component life and extend the program intervals, eliminating inspections and providing significant cost reductions over the life of the contract.

HKJ Group's Long Term Agreements can range from full service offerings to a pricing agreement. Services offered include, but are not limited to:

Parts Supply – HKJ Group supplies refurbished parts over the life of the agreement and integrates OEM parts. HKJ Group also supplies the latest durability and performance upgrades over the life of the contract. Available Parts Supply services include the latest technology improvements and upgrades, supply chain management, inventory management, miscellaneous parts kits and operational spares.

Parts Reconditioning – HKJ Group provides LTA customers with access to our full scope of reconditioning services including engineering services, an inventory of spare and emergency parts, reconditioning of customer's parts.

Field Services – HKJ Group offers a fully integrated outage team of highly experienced professionals capable of completing overhauls in a timely, safe, and quality manner. HKJ Group Field Services support a wide range of skills.

Monitoring and Diagnostics - As part of the HKJ Group LTA, engineers at the HKJ Group Monitoring Center at our Danish headquarters, monitor customer turbines and overall plant performance. We use state-of-the-art technology and real-time data to track key performance indicators, provide early warnings of potential issues, analyze the causes and recommend solutions for both immediate fixes and long-term improvement.
